### Factoring with GCF

4.5 Factoring Binomials The last type of factoring that we need to look at is factoring binomials. Once we are able to ... a. As is all factoring, the first thing we need to do is factor out the GCF. Here the GCF is 8. We get ( ) Now, we have the difference of cubes. Keep in mind that 1 raised to any power still gives us 1.

### 4.5 Factoring Binomials - Jon Blakely

Factoring Binomials. If a binomial expression can be factored at all, it must be factored in one of four ways. To decide which way you will use, you first look at the addition or subtraction sign that always separates the two terms within the binomial. Then you look at the two terms.

### Factoring Binomials - dummies

Objective: I can factor binomials that are difference of squares. A difference of squares is a binomial of the form:  $a^2 - b^2$ . Take note that the first term and the last term are both perfect squares. When we factor a difference of two squares, we will get  $a^2 - b^2 = (a + b)(a - b)$  This is because  $(a + b)(a - b) = a^2 - ab + ab - b^2 = a^2 - b^2$

### Cubing Binomials and Factoring Polynomials Date Period

Algebra Factoring Polynomials 7C Factoring expressions is one of the gateway skills that is necessary for much of what we do in algebra for the rest of the course. The word factor has two meanings and both are important. Factoring using GCF: Take the greatest common factor (GCF) for the numerical coefficient.

### Factoring using GCF

Always look for common factors when factoring. If the terms of the binomial have a GCF other than 1, then factor that out first. Example 8: Factor:  $54x^4 + 128x$ . Solution: Begin by factoring out the GCF  $2x$ .
