Piecewise Functions Date Period
Here is a set of practice problems to accompany the Derivatives of Exponential and Logarithm

Functions section of the Derivatives chapter of the notes for Paul Dawkins Calculus I course at Lamar University.

Calculus I - Derivatives of Exponential and Logarithm ...

Section 4-14 : Business Applications. A company can produce a maximum of 1500 widgets in a year. If they sell x widgets during the year then their profit, in dollars, is given by, $P\left(x \right) = 30,000,000 - 360,000x + 750{x^2} - \frac{1}{3}{x^3}$ How many widgets should they try to sell in order to maximize their profit?

Calculus I - Business Applications (Practice Problems)

4 8 16 In the first call to the function, we only define the argument a, which is a mandatory, positional argument.In the second call, we define a and n, in the order they are defined in the function.Finally, in the third call, we define a as a positional argument, and n as a keyword argument.. If all of the arguments are optional, we can even call the function with no arguments.

pycse - Python3 Computations in Science and Engineering

ans = piecewise(n == -1, log(10) + 9/y, n ~= -1,... (10*10^n - 1)/(n + 1) + 9*y^n) ... Symbolic Math Toolbox provides a set of simplification functions allowing you to manipulate the output of a symbolic expression. ... Different problems require different forms of the same mathematical expression. Knowing what form is more effective for ...
