Silicone oils are important tools in vitreoretinal surgery because they have the ability to displace aqueous humor from the retinal surface, maintaining the adhesion between retina and retinal pigment epithelium. To understand this capability, it is important to know the silicone oil characteristics. Herein, we report first on the main chemical-physical proprieties and then we review the ...

Dr. Jeffrey Heier is the Co-President and Medical Director of Ophthalmic Consultants of Boston (OCB). He is a leading researcher for new treatments in vitreoretinal disease, surgical techniques, and diagnostic imaging of the retina. Dr.

Iveric

• Local and regional anesthetic techniques has largely replaced general anesthesia. • Understanding functional anatomy and surgical techniques is essential for selection of regional techniques. • Sub-Tenon's nerve block is one of the most common choices for anesthesia as it can generally achieve akinesia with the favorable safety profile.

Local and Regional Anesthesia for Ophthalmic Surgery - NYSORA

Modern vitreoretinal techniques most likely involve small-gauge vitrectomy and use of intraocular dyes to stain the ERM and facilitate peeling. Many authors have advocated peeling of the internal limiting membrane (ILM) to decrease the possibility of ERM recurrence. 1-4 Although ILM peeling has generally been accepted as a fundamental step in ...

Lighting Techniques. Remember that there is a human on the other end of the scope. Cranking up the light intensity may improve your view, but it's uncomfortable for the patient. If you must do so, give a courtesy heads-up and keep it short. The rule of thumb is to decrease the beam width and/or height as you increase brightness.

How to Use a Slit Lamp - American Academy of Ophthalmology

These noninvasive techniques identify aneurysms as small as 3 to 5 mm. If these tests return negative and clinical suspicion remains high, then conventional catheter angiography should be ordered. A complete, pupil-sparing third nerve palsy in a patient older than 50 with vasculopathic risk factors does not necessitate neuroimaging.

Diplopia: Diagnosis and Management: Evaluation and Management

Sulfur hexafluoride is a sulfur coordination entity consisting of six fluorine atoms attached to a central sulfur atom. It is the most potent greenhouse gas currently known, with a global warming potential of 23,900 times that of CO2 over a 100 year period (SF6 has an estimated lifetime in the atmosphere of between 800 and 3,000 years).
